KYIV METRO MASTERS 2

Interface and Character Control Instructions (Mobile Version)

This section describes character control, interface buttons, and basic player actions in the game **Kyiv Metro Masters 2** on mobile devices.

Character Control (2D)

Character control is performed using on-screen buttons.

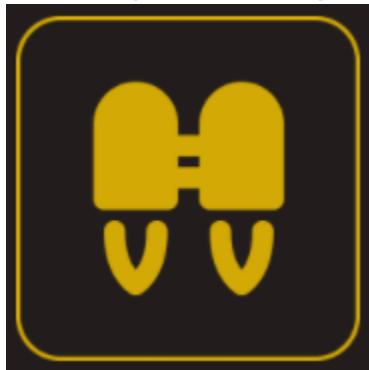

Character Movement

- **White button with left arrow** — character moves left

- **White button with right arrow** — character moves right

- **White button with up arrow** — character jumps

NoClip Mode

The game has a **NoClip mode** that allows free movement while ignoring collisions.

Enabling / Disabling NoClip

- **Yellow button with jetpack icon** — turn NoClip mode on or off

Movement in NoClip Mode

While NoClip is active:

- **Up arrow** — move up

- **Down arrow (white button)** — move down

- **Left / right arrows** — horizontal movement

Train Spawning

The game features a train creation (spawn) button.

- **Green button with train icon** — spawn a train

Conditions for Spawning a Train

To spawn a train, you must:

- not be inside any train;

- be in a place allowed for spawning:
    - on a station platform;

    - in a dead-end;

- the character must be standing clearly on the platform.
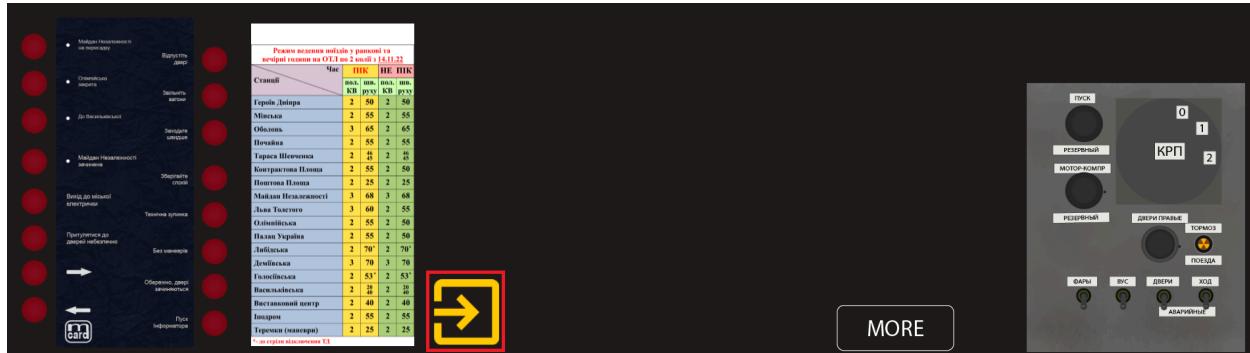

Button Indication

- **Button is fully opaque** — location is available for train spawning

- **Button is semi-transparent** — location is not available for spawning

If the button is semi-transparent, make sure you are standing exactly on the platform.

Important

- Currently, it is impossible to delete a train.

- To spawn a new train in a different location, rejoin the line.

Exiting the Train

To exit the train:

1. Press the **«More»** button

2. Switch to the **second window**

3. Press the **yellow button with the exit icon**

After this, the character will leave the train.

Teleportation Between Stations

Conditions

- You must not be inside a train.

- If you are inside a train, first exit it using the **«More»** button (see the previous section).

Teleportation Procedure

1. Tap the **chat message input field**

2. Type one of the commands:
   - `!st`

o `!tp`

3. Press **Send**

4. A station selection window will appear

5. Choose the desired station

6. Press **«Confirm»** — you will be teleported to the selected station

Or:

- press **«Close»** to cancel teleportation

Removing Focus from the Chat Input Field (Mobile)

After typing text, the chat input field may remain focused or active.

To remove focus:

- press the **white «Send» button** next to the input field

Or:

- clear all text in the input field;

- press **«Send»**.

After that:

- focus will be removed from the input field;

- the text input field will disappear from the screen.

This document covers all basic elements of character and interface control required for comfortable gameplay.
